Yale Postdoctoral Exit Survey

Postdocs who finish their training at Yale are invited to complete a voluntary exit survey. Below is a summary of career outcomes for those who finished their training between January 1, 2015 and March 31, 2021.

Part I: Population Data

Response rate: 30%
The Yale Postdoctoral Exit Survey is a voluntary online Qualtrics survey. All postdoctoral appointees who are promoted to another rank or who leave Yale are invited to participate. In the reporting period of January 1, 2015 to March 31, 2021, 892 (30%) of 3,0001 eligible postdocs completed the survey.

Discipline of Respondents

Life Sciences, 55%
Physical Sciences & Engineering, 25%
Social Sciences, 14%
Humanities, 5%

Disciplines are self-reported and do not necessarily correspond to the department in which a postdoc was appointed. For example, postdocs in a life science department may identify as physical scientists.
The response rate is representative of the overall postdoc population at Yale, which also shows the same 56% male to 44% female breakdown.

The response rate is not representative of the overall postdoc population, which is shown in the table below. Asian and Hispanic postdocs were underrepresented in the survey results.

Yale Postdoctoral Exit Survey

Visa Status

- **Citizen, 38%**
- **J-1, 40%**
- **F-1, 7%**
- **H-1B, 8%**
- **Perm Resident, 6%**
- **Other, 1%**
- **TN, 0%**
- **J-2, 1%**

Approximately 44% of survey respondents were U.S. Citizens or U.S. Permanent residents, yet these groups comprise only 35-36% of the overall postdoc population at any given time. They are therefore overrepresented in the survey results.

We do not have data on the percentage of postdocs who were on a given visa between 2015 and 2020.

Plans upon Completing Postdoc

- **Employed, 79%**
- **Further Education, 3%**
- **Job Seeking, 15%**
- **Other, 3%**

These data show that whereas almost 80% of postdocs were employed upon completing their postdoc positions, a sizable 15% left without having a job yet.
Yale Postdoctoral Exit Survey

Part II: Ratings

Survey participants were asked to rate their overall experience at Yale as well as the quality of the mentoring that they received from their faculty mentor. Data for all respondents are shown on this page. On the next page data are compared between those who were employed vs those who were still seeking employment upon completing their positions.

Overall Postdoctoral Experience

63% of postdocs rated their experience as very good to excellent, whereas only 16% rated it as fair to poor.

Quality of Mentoring Received

54% of postdocs rated the quality of the mentoring they received as very good to excellent.

Compared to the ratings above of overall postdoc experience, a larger percentage (23%) of postdocs rated mentoring as fair to poor.
Ratings were compared between postdocs who were employed upon completing their positions and those who did not have jobs upon leaving Yale.

**Overall Postdoctoral Experience**

An excellent postdoc experience correlated with a positive career outcome: almost twice as many postdocs who were employed rated their experience as excellent. In contrast, three times as many postdocs who were unemployed rated their experience as poor.

**Quality of Mentoring Received**

Postdocs who were employed were more likely to rate the quality of mentoring as excellent. Postdocs who were unemployed were twice as likely to rate their mentoring as poor.
Part III: Employment Data
The remaining data are shown only for those who reported that they were employed upon completing their postdoctoral positions.

Job Location

Whereas only 44% of the postdocs completing the survey were U.S. Citizens or U.S. Permanent Residents, 75% of postdocs remained in the U.S. for their jobs. China, Germany, Canada, and the United Kingdom were the top international job locations.
These data show that almost 2/3 of postdocs enter academic positions. The data on the next page, however, demonstrate that most enter non-tenure track positions.
Postdocs entered a wide array of positions. The two largest groups are those in research positions (43%) and faculty jobs (24%). Of note is that 12% entered another postdoctoral position.
Starting Salary

The median salary for those who reported salary data was in the $60,001-$70,000 range. To see if the median for more recent postdocs differed from the median across all years (2015-2021), data were examined just for postdocs who completed the survey since January 1, 2020. The median remained in the $60,000-$70,000 range.
Yale Postdoctoral Exit Survey

When Did Job Search Begin?

Very few postdocs waited until the last few months of their postdoctoral positions to begin the job search process, and over 40% began the process at least a year in advance of leaving their postdoctoral positions.
How Long Did it Take to Find a Job?

Data on when a job offer was accepted were compared to when the same individual’s job search began. The mean time period necessary to find a job was 6 months, and the median was 5 months.
Postdocs used multiple methods to find jobs, but these data represent the method that they reported as their primary source for looking for job openings.
These results show that 18% of postdocs who received jobs never applied to an advertised job posting. The overwhelming majority did, however, and of those who applied to advertised jobs, the median number of job applications submitted was 7 to 10.
